

1320 PACKED BED SCRUBBER

FUNCTION- The ANCO No. 1320 Packed Bed Scrubber is an effective technological solution in treating obnoxious odor emissions associated with all types of rendering plants. Non-condensable gases that generate from condensing process vapors along with rendering plant room air are treated by the scrubber. In the scrubber, these foul gases being well distributed by the packing media come in contact with a chemical solution which treats them prior to atmospheric discharge. A single or multiple stage scrubbing system can be set up with manual or automatic chemical controls to treat emissions that comply with the strictest air regulations.

FEATURES- Constructed out of 304 & 316 stainless steels, the no. 1320 was designed to stand up to harsh environments while providing a long service life. Its packing media and mist eliminator are designed to give a low pressure drop and high efficiency. Contact ANCO-EAGLIN for scrubber and related equipment sizing information for your particular application.
